

Supply Chain Security Solutions

Supply Chain Security a global concern

Everyday the world's economic well-being relies on the secure and efficient movement of goods around the globe. Cargo supply chains are inherently complex. This stems from multiple conditions such as the large number of actors involved in today's global trade structure, emerging manufacturing and assembly markets, increasing trade volumes, evolving consumer expectations as well as the development of advanced capabilities in transportation and cargo handling technologies. Unfortunately, threats to the global economy are evolving as well. Domestic and trans-national threats to cargo security continue to increase in number, complexity, severity and potential consequence.

Without proper security to address these threats, the global economy is more at risk now than ever before. Government and industry stakeholders worldwide are now embracing security measures as a core component of national and corporate strategy.

To address these needs, Cotecna's COSEC department is dedicated to and responsible for the development and implementation of supply chain security solutions. The COSEC team, with offices in Washington, DC and Geneva, Switzerland, is fully prepared to support these requirements with tailored solutions that include advisory services, cargo tracking and monitoring services, and cargo scanning, inspection and detection services.
